# **FOR IMMEDIATE RELEASE**

## ***ROSS CONTROLS® Expands DM Valve Series for Air Dump/Safety Exhaust Applications***

---

(TROY, MI – March, 2017) – ROSS Controls®, introduces an expansion to its existing DM Series Valve family for air dump / safety exhaust applications.

The ROSS® DM<sup>1</sup> Series C Valve is a 3/2 Control Reliable Double Valve with dynamic monitoring that can be used in Category 4 PL e applications that include a memory reset function that is managed at the PLC level and not internal to the valve.

The DM<sup>1</sup> Series C Valve is available in port sizes ranging from ½” – 1”, has a highly contaminant tolerant poppet construction and is base mounted for convenience. Other options include port threads, voltages, and electrical connections.

Additionally, this pending BG Certified valve will soon be included in the SISTEMA library data that is downloadable from the ROSS website.

Control Reliable Energy Isolation Valves enable rapid exhaust of downstream air when de-energized to remove stored energy and allow safe access to work areas. The DM<sup>1</sup> Series C is the latest addition to the ROSS® Energy Isolation Valve family, which covers a wide range of sizes and options including being combined with lockout valves and filter regulators in air entry packages
